InternHub - Product Backlog

Initial backlog derived from the project brief and current user stories

1. Purpose

The Product Backlog contains the prioritized work required to build InternHub. It is expected to evolve as requirements are clarified and the team receives feedback.

2. Product Backlog

ID	Backlog Item	Actor	Priority	Acceptance Criteria / Expected Result	Dependencies	Status
PB-01	Create Student Profile	Student	Must	A student profile can be created successfully and used for internship applications.	None	To Do
PB-02	Publish Internship Offer	Recruiter	Must	An offer can be published with title, company name, requirements, deadline, maximum slots, and Version.	Recruiter access	To Do
PB-03	Browse Active Offers	Student	Must	The student can retrieve and browse internship offers that are currently active.	PB-02	To Do
PB-04	View Offer Details	Student	Must	The student can view the complete details of a selected internship offer.	PB-02	To Do
PB-05	Apply to an Offer	Student	Must	A valid application is accepted. The system rejects applications after the deadline, duplicate active applications for the same offer, and applications beyond the active-application limit.	PB-01, PB-02	To Do
PB-06	Withdraw Application	Student	Must	Withdrawal is allowed only in permitted states. Withdrawing a Shortlisted application triggers recruiter notification.	PB-05	To Do
PB-07	Decide Application	Recruiter	Must	The recruiter can accept or reject an application. If no slot remains, the candidate becomes Waitlisted.	PB-05	To Do

ID	Backlog Item	Actor	Priority	Acceptance Criteria / Expected Result	Dependencies	Status
				Concurrent decisions for the last slot are handled safely.		
PB-08	View My Applications	Student	Must	The student sees all applications with company, offer title, and current status, ordered by application date descending.	PB-05	To Do
PB-09	Close Internship Offer	Recruiter	Must	The recruiter can close an offer. New applications are rejected while existing applications remain active for evaluation.	PB-02	To Do
PB-10	AI CV Feedback	Student	Must	The system returns matchedSkills, missingSkills, and suggestions in valid structured output. CV text is not stored or logged, and AI does not rank or reject candidates.	PB-02, Ollama	To Do

3. Backlog Gaps to Clarify

- How recruiters are represented and authenticated.
- Which application statuses count as active.
- How the waiting list is ordered.
- Whether an Accepted candidate may withdraw and free a slot.
- Whether a closed offer can be reopened.
- How the system behaves when local Ollama is unavailable.

4. Notes

During sprint planning, each backlog item may be split into technical tasks such as frontend work, API implementation, database changes, testing, and AI integration. Those tasks support the Product Backlog items rather than replace them.
